Namene Solar believes in solar power without limit.

“ Our mission is to enable access to affordable, clean, modern energy.

We connect people to the sun to power their lives and businesses!

#LightsPowerAction

Our story so far...

Namene Solar, previously known as Yingli Namene Solar, has operated as a team since 2015 and was incorporated in October 2017.

Our experienced team brings years of expertise to **commercial and industrial solar at any scale**, wherever power is needed.

From utility scale power plants that supply the national grid, to rooftop solar solutions for businesses, our solar systems are **built to suit the scale of your demand.**

POWER FROM YOUR LAND

SOLAR PROVIDES AN ADDITIONAL, LUCRATIVE REVENUE SOURCE THAT COMPLEMENTS EXISTING BUSINESS ACTIVITIES.

Leasing your land for a solar farm generates income, offsets global carbon emissions and ensures the long-term financial security of your farm.

Solar PV plants provide a stable income that complements your farm income and is guaranteed for the life of the solar plant. The rental income from leasing your land for a solar farm is inflation-linked, making it a reliable and stable source of revenue.

Our solar installations allow you to continue to graze the land if you choose, with the option to maintain the agricultural use of the site.

Why choose to work with Namene Solar?

Namene Solar is a **complete solar services provider**. Together with our long-standing partner in the UK, we develop and build solar systems to provide clean, affordable electricity to the National Grid.

Our **experienced team** has decades of combined expertise in developing, building and connecting solar farms in the UK and across Europe.

Our deep experience includes all aspects of commercial and industrial solar, **from design and development to connection**. As a diverse group of highly-skilled people, our team is committed to providing access to solar energy, wherever power is needed.

OUR PROPOSAL

If you have over 30 acres of land that is:

- Flat and unshaded***
- Grade 3 or lower quality***
- Close to an electrical substation...***

It may be suitable to lease for a solar PV plant. We will carry out a free land survey and investigation of grid capacity to assess the potential of your land.

If the assessment results are positive, we can discuss the opportunity of moving forward with project development. We will propose an Option to Lease for your land and submit a planning application to the local planning authority.

Once we obtain the planning authorisation and satisfy the planning conditions, we will then enter the lease agreement and construction works can begin.

We then connect the plant to the local grid infrastructure and start to generate and export the solar electricity produced from the plant.

As a direct benefit, you will receive an attractive, inflation-linked income for many years to come.

Meet your team!

Ramin
Project Director

I have over 15 years' experience in the solar energy sector, and to date I've been involved in delivering over 350 MW of projects in the UK, ranging from schools and commercial businesses to utility scale developments.

My experience covers every aspect of projects, from developing financing to construction and operation. I also served for three years on the board of directors of the UK Solar Trade Association.

Beatrice
Associate Director

I've gained more than 5 years' experience in the solar energy sector, on subsidised and unsubsidised projects. It has seen me work across a broad range of markets: from Portugal, Spain and Italy, to Kenya and UK.

My experience spans all key areas of commercial project delivery, from development to connection.

Meet your team!

Patrick

Managing Director

I spent 15 years in investment banking, leading global innovation teams and deploying solutions for major international groups (Dresdner Bank, BNP Paribas Exane, Natixis, Mitsubishi Securities) in Europe and Asia.

I founded Namene Energy with the ambition to combine my engineering and structured finance skills, to deliver innovative solutions in one of the fastest growing markets.

Jason

Finance Director

I have worked with the Namene Solar team since 2016 and have 8 years' experience in the renewable energy sector.

I formerly worked at Deloitte before joining a UK solar developer as finance director, leading the business from entrepreneurial start-up to one of the UK's leading solar developer and EPC companies.

THANK YOU

Powered by the sun and inspired by human potential, we'll make sure your next step in solar is simple.
