

## Position: Data Analyst

### Job Description

Namene Solar is currently seeking a full-time position for a data analyst to join our Climate Team. This is an exciting opportunity to help a growing team deliver incredible impact by managing the data analysis and data quality control process in the company to track the distribution, monitoring and reporting of solar lights in projects in Africa and other locations.

This is a rare opportunity for data analyst to contribute to making a direct impact in rural off-grid communities by enabling first time access to clean lighting and solar energy through better data analytics on data quality control, customer satisfaction and other data driven insights.

The successful candidate will report to the Head of Climate and Managing Director and will be responsible for maintaining and updating the current company databases and data analytics tools and reporting systems and provide support to the country offices and the Climate team.

**Location:** UK, or Europe (other locations for remote working would be considered for exceptional candidates on a case-by-case basis)

### Role and responsibilities

- Database analysis – analyse data pertaining our solar light carbon distribution projects.
- Conduct data quality assurance audit, verification processes and implement data correction solutions.
- Run and manage data scripts from our project and company database.
- Execute data quality control strategies and policies.
- Work closely with:
  - Research and Training Associate to design better data collection processes.
  - Operations Associate to ensure data collection processes are implemented.
  - Local Data Analysts in our country operations to coordinate data strategies across climate projects.
  - Operations and After Sales team to propose and implement data solutions.
- Recommend and update data policies and procedures to improve quality and efficiency.
- Collaborate with sales team to improve effectiveness and efficiency of data collection.
- Create customised reports on data analytics.

### Skills and Experience

Minimum 2 years full-time working experience in data analysis. Previous experience working in the fast moving consumer goods (FMCG) industry a plus.

- Strong skills on database analysis software
- Python programming skills
- Excellent Microsoft Excel skills
- Strong analytical skills with great attention to detail

Additional skills

- 
- Excellent communication skills in English. Additional languages are an advantage.
  - Team player, able to delegate and to share tasks and responsibilities within a team.
  - Active listener, customer oriented and able to improve processes and services provided to clients and partners.

### **Remuneration**

Based on candidates' experience, skills and location.

### **Why join the Namene Solar Team?**

Namene Solar delivers solar power without limit. We want to bring everyone, everywhere access to clean, modern energy by connecting people to the sun to power their lives.

We know that solar is the right thing for people and for the planet. That's why we are working together as a team to reach our goal of bringing truly sustainable, affordable solar light and power wherever it is needed. At Namene Solar, we are a fast-growing team that takes a collaborative approach to business. We give our team members the opportunity to shine and make their mark both in the company, and the rapidly growing sector.

### **Company culture**

As a remote-first company we work in a trust-based environment that gives our team members flexibility, responsibility and accountability in their work.

We are a supportive and welcoming team that respects each individual's unique skills and experiences and values diversity and inclusivity in our work environment.
