

Solar Lights Distribution Project in Namibia

Developed by Namene / May 2023

Harnessing solar energy to transform lives

Our project in Namibia gives modern energy access to people living in informal settlements in peri-urban areas and in rural households. Currently these families rely on kerosene and other fossil fuels for lighting. Our project replaces these polluting lamps with ultra-affordable solar lights. This exchange alleviates poverty, promotes education, and safeguards the health of families. Crucially, this substitution decreases dependency on fossil fuels , eliminating ongoing fuel costs for low-income households and helping to address climate change.

In Namibia 54% of the population overall have no electricity access. In rural households, this proportion is even higher, at 65%. Kerosene or paraffin lamps and candles provide dim, low-quality light that is dangerous, and sometimes deadly. They emit toxic fumes that cause respiratory illnesses, create fire risks, and contribute to climate change.

First Gold Standard project certified in Namibia

Combining quality with affordability

Our portable solar lights are built to last and have won awards for their quality and accessibility. Thanks to the issue of Gold Standard accredited Verified Emissions Reductions or VERs, our lights are priced with a 60 to 70% discount on the retail value – making them affordable to all.

Our lights have quickly gained significant market shares in the pico lights market in Namibia (90%), Zambia (72%) and Zimbabwe (83%)¹ over the relatively short time of their distribution - showing that trust in the durability of the product, as well as affordability made possible through our carbon subsidy model, are key to unlocking clean technology for those who need it the most.

Empowering every community

Our lights are delivered by our in-country teams, as well as last-mile distribution partners. They are sold through community networks and regional clusters, such as rural schools.

Project Details

Project owner	Namene
r toject owner	Namene
Carbon Standard	Gold Standard for the Global Goals
Project ID	GS 7784
Carbon methodology	AMS-III.A.R v6 – Substituting fossil fuel-based lighting with LED/CFL lighting systems
Certification stage	GS Design Certified since December 2020
Development stage	Distribution of lights in progress. 120,000 lights distributed so far.
Technology	Renewable energy – solar lights
Project scale	Small scale. Distribution of up to 652,000 solar lights
Target beneficiaries	Rural households without access to electricity
Project duration	10 years
Crediting period	31/12/2021 - 31/12/2026
Average VERs per year	45,000 VERs

Our technology

Portable, reliable, high-quality solar lights

We design our products to last as long as possible, and provide maintenance support and tailored after-sales care to our buyers, including those living in the most remote locations. In doing so, we build long-term relationships with each of our customers based on trust and mutual benefits.

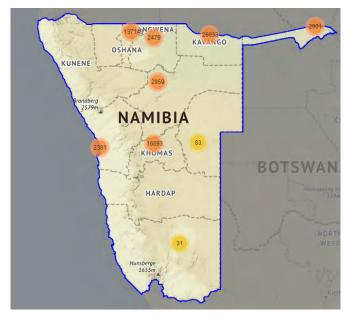

Our lamps are multifunctional and portable. They can be used indoors as desk lamps or hung on the wall. They can be turned into headtorches perfect to walking, cycling, or commuting. This project delivers a host of socio-economic benefits, with specific impacts measured against three UN Sustainable Development Goals.

High-integrity carbon credits

We're committed to making a measurable, transparent and positive impact with our carbon credits.

In addition to Gold Standard's requirements, we apply a stringent internal audit process which goes beyond these requirements – with higher frequency monitoring and surveys, increased product warranty periods, and ongoing customer engagement campaigns to guarantee the emissions reductions created by our projects.

We use a customised digital tool that captures customer data at the point of sale, collects automated statistics into a central database and monitors the ongoing performance of our projects. We also conduct regular customer surveys.

Visualisation of units deployed under the carbon project using Namene's bespoke monitoring systems.

Our focus is on tracking the impact of all Namene devices, including where and how they are used, and when they should be serviced for maximum efficiency. We are also constantly improving the design of our products, with a usage reporting functionality built into models launched in 2023. We take care to partner with committed organisations who buy our VERs to complement, not replace, actual reductions in GHG emissions from their operations and value chain.

BUSTAINABLE G ALS

Certified contributions to three SDGs

SDG 1: No Poverty

Our lights tackle poverty by saving household expenditure on lighting fuels and batteries. They also unlock extra study hours for children, which helps break the cycle of poverty.

SDG 7: Affordable and Clean Energy

Our project makes solar light truly affordable and accessible to over one million people in Namibia.

SDG 13: Climate Action

Our project reduces greenhouse gas emissions by replacing fossil fuel-based lighting by clean pico solar lights.

Additional project impacts

Light quality – Fossil fuel lamps typically produce 10 lumens of light. Our solar lights produce 34 lumens. Education – Extra study hours for children, which supports higher grade attainment.

Health – Better air quality in homes, protecting families' respiratory systems, and brighter lights that avoid straining eyes.

Road accidents – Visibility of pedestrians and cyclists at dusk, dawn, and night.

Safety – Fossil fuel lamps are dangerous to ignite and pose poisoning risks to children. Solar lights can also help women be safe when outside at night.

Income generation – We offer employment opportunities through our project. Extension of the light hours also enables new income generating activities.

'Solar lanterns currently provide the most "bang-for-your-buck." [...] The impact they create is often greater than that of highercapacity systems. This is because [...] these small but mighty products are the first step up the modern energy staircase.'

Why off-grid energy matters – report by 60 Decibels, Feb 2020 **www.60decibels.com**

About Namene

Our purpose is to empower every community through clean technology.

Namene is a business that believes people and planet should come first. We provide affordable, highly reliable, everyday devices to those who need them the most – harnessing clean technology to transform lives and livelihoods.

Without ever compromising on quality, we make sure our products are always affordable and accessible to all by using their carbon-saving value to subsidise prices through the sale of high-integrity carbon credits, and enabling our customers to buy what they need when they need it.

Our 'Buy As You Can' approach offers a much needed alternative to traditional utilities packages, which are most often not affordable to low-income families, or when they are, commit households to purchasing bundles of overspecified products through expensive, long-term loans. By offering single, modular and

@namenesolar namenesolar.com Namene Solar Lights Ltd. 51 Holland Street, London W8 7JB, United Kingdom affordable products, we enable our customers to free up income to buy other clean devices when they need and can afford them.

All devices distributed by Namene are designed to help people and families thrive, wherever they live, by meeting their daily utility needs while eliminating sources of combustion – starting with eradicating harmful kerosene lamps.
